## Bonded DSL

### How Bonded DSL works

Unlike many combined solutions, our service bonds up to four standard ADSL lines together using an aggregated connection to take advantage of the combined speed of all four lines. We provide pre-configured routers that effortlessly combine these multiple lines enabling you to manage your connection as a single line.

## How Bonded DSL will benefit your business

<b>Cost-effective</b>	Up to 70% cheaper than a Leased Line with the added benefit of no expensive install costs.
<b>Increased speed</b>	Combined lines can offer speeds of up to 80Mb download and 4Mb upload to improve business productivity. Ideal for supporting high-bandwidth applications, file transfers and cloud hosted services.
<b>Enhanced resilience</b>	By combining ADSL lines, even if a line fails, your connection will remain and your service will continue.
<b>Advanced monitoring</b>	Private, dedicated access to our portal allows complete control over your bandwidth. Prioritise traffic, configure firewalls and receive detailed status updates to make sure that your connection works perfectly for you.
<b>Rapid provisioning</b>	We'll get your service up and running quickly, without your business losing service during installation.
<b>Flexibility</b>	Simply add or remove lines as your business requirements change. Service contracts are available for 1 or 12 month periods to suit the way your business works.
<b>FTTC alternative</b>	Many areas of the UK don't have access to FTTC, whereas our Bonded DSL solution is readily available throughout the whole of the UK.
