Supporting business needs

Solution – Managed WAN
Coverage – National, 30+ Clinic and admin sites

As an organisation dealing with confidential medical records, as well as clinical procedures and research, the security and performance of both their data and services are critical to THT's business objectives. With their KCOM managed WAN they now have total security and peace of mind for sensitive data, in addition to the capability and flexibility to deploy new and emerging applications and technologies across the organisation to enhance the work they do.

Key benefits of the solution include:

> 40% annual savings against legacy network costs

> Improved integration for remote and home workers without compromising security

> A connected network to enable future strategy including integrated telephony and centralised management of endpoint security

By partnering with KCOM, THT could ensure the migration from their legacy managed services supplier was supported end-to-end.

With their new network, THT is now able to take advantage of new and emerging technologies and can now look at additional applications to complement this service, ensuring they have the right solutions to continue their life altering work.

"The WAN provided by KCOM has proven flexible, cost effective and secure, allowing THT to move forward on security and mobile working projects. Prior to implementing the KCOM WAN, THT had been limited in its ability to deliver improvements to systems and ways of working, now the integration of all our sites into a central VPLS has allowed THT to lower the administration overhead in managing our endpoints."
